CORPORATE PROFILE

ABOUT US OUR CORE VALUES

Customer:
First, Always

+

Our People:
Our Strength

+

Quality Policy:
Non Negotiable

+

Commitment:
We Keep Our Words

+

Excellence:
We Give Our Best

The company has begun to work officially assimilating youth power, research experiment of more than 20 years master directorship, modern knowledge of the world and systematic production line on 2005.

The company began its activity with design, produce and offer modern and classic park lights and continued its activity by offering types of base of street, lights, echoic lights, urban electronic decorations systems, types of optical telescope towers, systems equipped to LED lamps and lately, it was completed by adding field of urban furniture, traffic equipments and open area body building devices. This company is serving by providing the biggest access network to productions related to services, urban furniture and open areas in all over the country including cities, villages, governmental and nongovernmental centers, private places such as garden, villa, etc. the great family of our customers include more than 800 municipality offices, about 350 rural district offices, 200 governmental organization and private companies.

This industrial unit could design and perform more than 2000 light, traffic and urban furniture projects by relying on young members of sale part, and using creative, active and hard-working personnel of production and employees of installation and service after sale section in a short time. Therefore, it can be said that Shahrsaazaan technical & engineering Company has the most part of urban furniture market and its services in the country with a very significant distance from its colleagues.

Duty of this service-production group as one of forehands of this industry, while drawing customers' attention, is to familiarize its customers and consumers with different dimensions of efficiency including: to design and determine suitable place and time for using products and help to increase knowledge of authorities in the field of technical particulars of productions along with providing a constant relation with related technical units for performing installation, triggering and support services operations systematically.

Health and occupational ethics.

- 1- to meet social norms for using opportunities
- 2- to compete with competitors according to abilities
- 3- to choose representatives suitably and interaction of win- winning customers, contractors and suppliers.

Current programs.

- 1- To develop and vary product by using modern technologies while increasing consent of customers
- 2- to provide very low use products of LED and solar systems (showing interest in plan of using solar, wind, etc. energies for providing light)
- 3- superintending of the customer on all stages of production and offer of production continuously and directly
- 4- to increase production and efficiency.

Important results.

- 1- to execute 2000 light, urban furniture and traffic projects in more than 1400 center in work resume for 10 years
- 2- to increase quality level of products
- 3- to send goods rapidly
- 4- to provide services after sale for less than 72 hours.

Agendum.

- 1- to use more desirable primary materials with more durability
- 2- to continue quality strategy, to send goods and service after sale in shorter times
- 3- to more receive international standards
- 4- to drive market of urban furniture in country, Middle East and North of Africa.

PRODUCTS

- Urban furniture equipments (open area).
- Lighting systems (open area).
- Traffic equipments.

CORPORATE PROFILE

Optical lighting tower.

Light towers are much used to illuminate large areas such as parks, excursion sites, squares, streets, bridges, and buildings spaces such as hospitals, factories, and so on

These towers are usually 12-30 m high in the motor and motorless types with fixed and moving baskets. Their external surface is protected using hot galvanized steel and their parts are assembled in the overlap form. Their basket security is supplied via interlocks and parachutes.

Stadium towers.

Stadium towers and structures are designed and produced to illuminate sports fields at different heights. The design of these poles is based on the type of the gymnasium application, required luxes of light regional atmospheric conditions, number of spectators, area and so on. A uniformly lighter and safer environment for spectators and players is a major objective of the design.

These structures are utilized in fixed and movable basket types. In the movable type, in order to replace or repair the light source, the basket is moved by an electric control fixed down the tower and the mechanical force of the motor. The easy and cheap movable type service and maintenance because of its movable head and no need for cranes for replacing lamps are some advantages of these structures.

Stadium lighting tower and Optical lighting tower is a new product of ShahrSaazaan engineering company that is lighting Urban Spaces and supplier of athletic fields and stadium lighting

Stadium lighting tower, has been designed for practice and standard fields and provide required lighting of sport fields by uniform light distribution. Stadium lighting tower has equipped with a telescopic base (Lawn) and lighting rods.

The projectors used in stadium lighting tower are 1000 w and 2000 w also this projectors are adjustable in various angles.

Constant and homogenous light distribution without damaging the eyes, use of a mechanized system to ascend or descend the projector has made the tower maintenance cost highly economical since there is no need to use a crane in order to clean the projector or change the lamps and the technician can repair the projector or change the lamps easily using the microprocessor control system installed inside the body of the lighting tower.

Engineering design together with following standards mentioned in ISO9001 during production phase has dramatically increase the quality of the tower leading to consumers' interest in our towers

Telescopic Lighting tower made by ShahrSaazaan Company is made in different heights ranging from 12 to 30 meters and the main body is made in the form of an incomplete pyramid with regards to the heights of 6, 8, 12, 14, 16 and its diameter changes from top to bottom

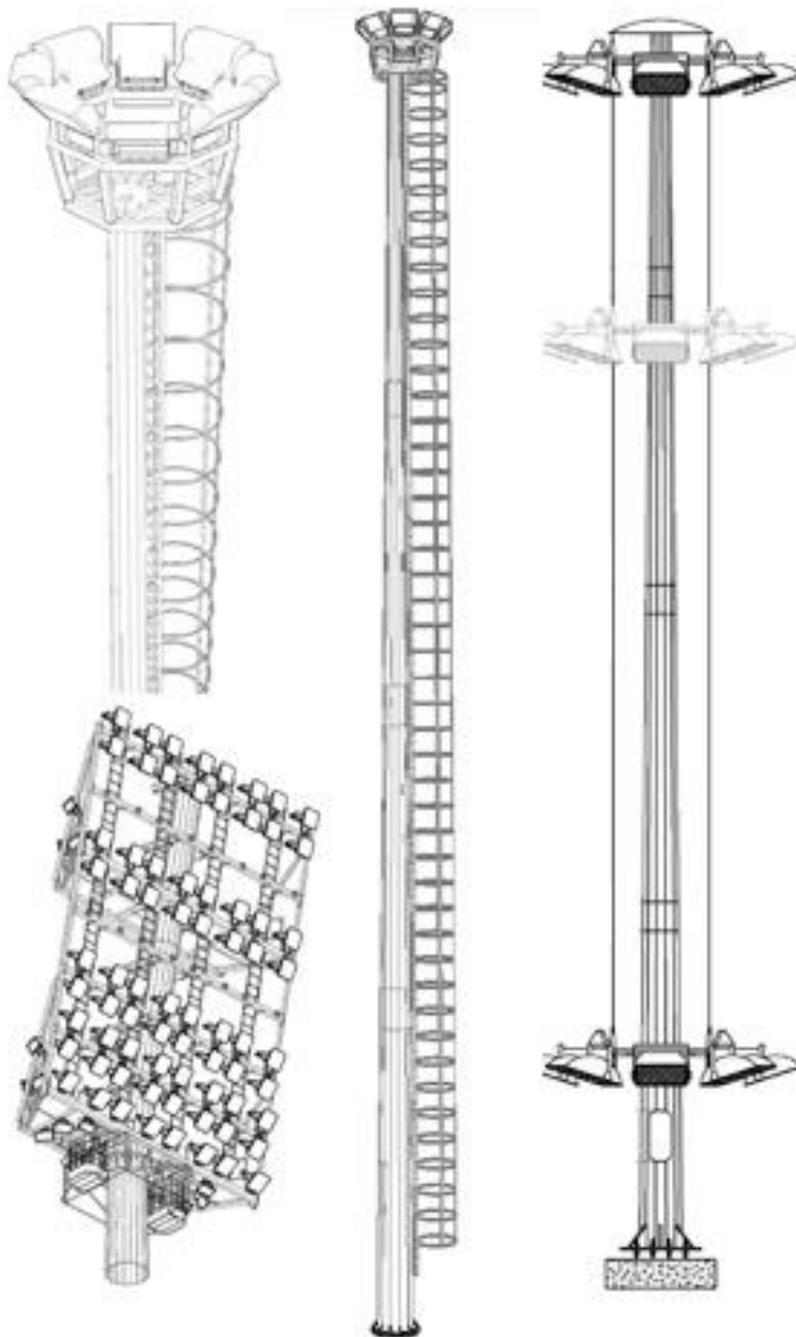

Visit Find your nearest high mast light tower can be installed on the production of telescopic 4, 6, 8, 12, 16, 24 and 30 device types can be variable and supplier Lighting 400 Watt 1 *, 2 * 400 Watts, 1 * 1000 Watt, 2 * 2000 watts used

The number of possible projectors which can be installed on the telescopic high mast light tower ranges from 4, 6, 8, 12, 24, 16, to 30 and different types of projectors namely 1*400wats, 2*400wats, 1*1000wats, and 2*2000wats can be used

Control and security systems have been installed inside the body of the tower in separate sections and do not occupy much space from the tower leading to more safety. All the parts and elements used in the tower are from the best and most valid marks available on the market

One of the other features enjoyed by the telescopic high mast light tower made by ShahrSaazaan Company is the alarm light installed on top of the tower which can be easily seen by and detected by flying objects such as airplanes and helicopters

Installation of a lightning absorber on the top of the tower protects the electric and electronic parts of the tower from shock-bearing clouds

In telescopic high mast light tower, the ascending and descending mechanism for the projector basket is designed in such a way with parts to enjoy maxim safety and security. Double gearbox motor, control circuit with valid parts from valid manufacturers, automatic interlock system etc. have been designed and manufactured.
